

Variations

Creating Product Variations

Step 1: Access Variations

- Go to **Products** → **Variations**.
- Variations are used for products that come in different options, such as colors, sizes, or other attributes.

Step 2: Add a Single Variation

1. Enter the **name of the variation** (e.g., Color, Size).
 2. List all the **possible values** for that variation (e.g., Red, Blue, Green for Color).
- **Example:** For jeans, create a variation named **Color** and include all available colors.

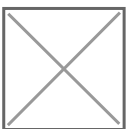

Important:

- You cannot delete a variation that is already assigned to a product.

Step 3: Add Multiple Variations for a Product

- For products with more than one attribute (e.g., a shirt with Size and Brand, or a book with Pages and Type), use **combined variations**.

Steps

1. Create a **combined variation name** that includes all attributes.
 - Example: `Size – Pages`.
2. Enter the **combined values** for each possible combination.
 - Example: `Long-30`, `Long-120`, `Long-200`, `Small-30`, `Small-120`, etc.

This approach ensures every possible combination is tracked correctly for variable products.
