

VMS Compliance Documentation

This document explains how our POS system works with the fiscal system (SDC) in a simple way.

1. POS must be connected to SDC

Our POS system **cannot create or print an invoice unless it is connected to the SDC.**

- If there is no connection → no invoice can be made
- This ensures all invoices are properly recorded by the tax system

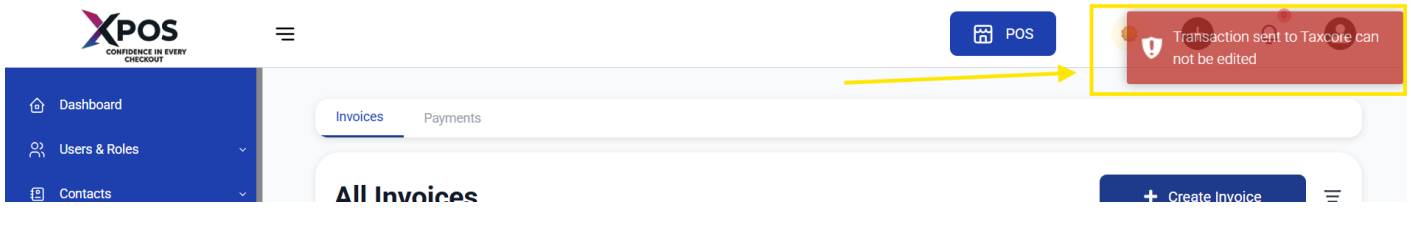

2. No changes to SDC response

When the SDC sends back invoice information, the POS system:

- **Does not remove anything**
- **Does not change anything**

What the SDC sends is exactly what appears on the invoice.

3. No sales without fiscal invoice

Every sale must have a fiscal invoice.

- You **cannot record a sale without generating an invoice**
- This ensures all sales are officially tracked

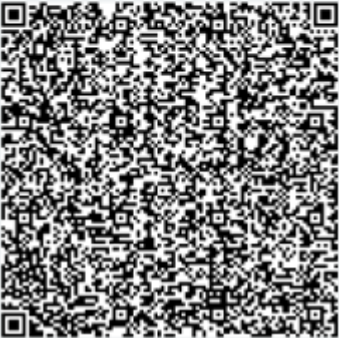

4. Invoice header must be complete

The top part of the invoice (issuer details):

- Includes **all information returned by the SDC**
- **Nothing is missing or hidden**

This guarantees correct business identification on every invoice.

```

5. External printer support

The POS system:

- **Supports an external printer**
- Can send invoices to a connected printer device

6. Built-in printing capability

The POS system also:

- Has printing as part of the system itself
 - Can print invoices directly without needing special setup
-

Summary

- No SDC → No invoice
 - No invoice → No sale
 - No changes allowed to SDC data
 - All invoice details must be complete
 - Printing is fully supported
-
